A huge field of view provides fast target acquisition and the fully coated lenses offer a crisp, clear, nonreflective sight picture. http://iohrp.org/f_files/dell-9400-owners-manual.xml

Featuring 11 brightness settings, Burris SpeedDot 135 Red Dot Sight is available in either a 3MOA size dot for precision shooting or an 11MOA dot for superfast action shooting. Since Burris introduced the Burris SpeedDot 135 Red Dot Sight and Burris have been overwhelmed by its enthusiastic reception. And why not Burris Speed Dot 135 35mm Tube RedDot Scope s a sight that holds up to brutal punishment, the Red Dot Scope delivers a crisp, perfectly round, bright,

adjustable brightness dot, Burris SpeedDot 1X 35mm RedDot Sight is waterproof and fog proof and has optics with fully coated lenses for a bright, clear sight picture. The warranty is automatically transferred to future owners. Shoot with confidence you're covered by the Burris Forever Warranty. Great value for the money. 3mm dot is great for fine accurate shooting. I ordered this Burris specifically because it was one. Its main flaw is the very Short Life of the battery. I use this sight for wild boar driver hunt, and in two days the battery is gone. The sight is easy to zero and holds it very well. The red dot is a tad blurry at the brighter settings, but for the most part it's solid so it's not a big deal. My gripe is the mount. So far I'm happy with my purchase. Always interested in purchasing quality guns, either single pieces or collections. Prices listed are for cash, cashier's checks, or money orders and reflect a 4% cash discount. This 4% will be added to all credit or debit card purchases and is nonrefundable if item is returned for any reason. By clicking buy it or following through with this card transaction you are agreeing to this nonrefundable fee. No personal checks. Iowa residents add 7% sales tax. We do offer layaway, call for terms. We do take quality or collectible firearms in on trade. For all modern firearms purchases we need a legible copy of your local dealer's FFL Federal Firearms License by mail, fax, or email. You have a 3 day inspection on all items.

If you do not agree with our description you can send the item back for a refund of the purchase price. Shipping charges and credit card fees will not be refunded. Check your local gun laws before purchase. If you live in a less than gun friendly city or state it is your responsibility to verify that the item you intend to purchase is legal to own and be sent there before clicking buy it. If the item is shipped and you are legally unable to finalize the transaction you are responsible for shipping charges both ways and a 15% restocking fee. [Current Subscribers Click Here](#). Here is a look at three of the newest. Before 1975, nobody in America knew what an electronic dot sight was. That year a Swedish company introduced something called the Aimpoint to the U.S. market. The Aimpoint was a flattish little box about four inches long with small lens apertures at both ends. But American hunters yawned and shrugged. A picture of him holding the gun made the cover of the NRA's American Rifleman. And everything changed. It was no joke that when the newly crowned 1992 USPSA National Champion, Todd Jarrett, stepped to the microphone to accept his title his first words were to thank Duracell batteries. Competition shooting was changed forever. And in much the same way that hightech vehicle performance features that win races soon find their way into your family car, so did ordinary shooters and hunters quickly catch on to the benefits of electronic sights and begin to use them in large numbers for the applications their inventors had envisioned. Each represents a very different technical design approach. Burris SpeedDot 135 Wellknown scopemaker Burris Dept. ST, 311 E. 8th St., Greeley, CO 80631; www.burrisoptics.com entered the electronicsight marketplace a little over two years ago with the introduction of its initial SpeedDot 135.

<http://www.drupalitalia.org/node/77658>

Like most such nonmagnifying optical sights, it looks much like a stubby 1X scope with lenses at both ends and external windage and elevation adjustment knobs. Tube diameter is 1.36 inches, with 35mm objective and ocular lenses. The tube is nitrogen filled and sealed to be waterproof and fogproof. Optics are fully coated for nonreflective sight picture. Overall finish for the SpeedDot 135 and accessories is matte black. Each SpeedDot 135 comes fully equipped with everything needed to mount and go including a pair of Weaver-type 35mm mounting rings that will fit standard Weaver-type crosscut bases, a screw-on tube extension sunscreen to deflect low-angled external light, lens covers, and an industry-standard No. 2032 camera battery with 200-hour-plus use life replacement batteries are available anywhere batteries are sold. The author's SpeedDot has held up through 1500 full-power .41 Magnum rounds with no problems or shift in position of its 50-yard zero. The battery is placed inside the brightness-setting ring on top of the scope body. Battery replacement is simple, via a coin slot in the cap, but you have to remember that merely turning the coin will rotate the whole adjustment ring and not unscrew the cap. To open the battery compartment, you have to grip the brightness setting ring and hold it in place while using the coin to unscrew the cap from the ring. These angular measurements translate into approximately three inches and 11 inches target coverage subtension at 100 yards. The three-minute dot is preferred by precision shooters and hunters seeking exact shot placement. It essentially marks the X-ring of a standard NRA bullseye target at 25 yards. The 11-minute dot is the choice of action pistol competitors and speed shooters because of its high visibility and quick acquisition for relatively large targets at close distances.

<https://www.fvsspa.com/images/bowflex-power-pro-xtl-home-gym-manual.pdf>

To acquire some practical assessment of these claims, I provided the 11MOA SpeedDot 135 sample Burris sent to Shooting Times to an avid local trapleague competitor who put it on his 12gauge Remington 1187 and has used it continuously for practice and matches throughout the 2001 summer league sessions. His round count is now over 3000 rounds fired with no failures, malfunctions, or shifts of zero. I've put more than 1500 rounds under it with no problems and no shift in the precision of its 50yard zero. So far, I'd rate the SpeedDot 135 as being as good as a dot sight gets. Bushnell HOLOSight II The initial HOLOSight model from Bushnell Dept. ST, 9200 Cody, Overland Park, KS 66214; www.bushnell.com was the first major technological advance in electronic sight design to come after the original concept of a parallaxfree internalprojected reticle as embodied in the Aimpoint and all subsequent tubestyle electronic sights. The difference between the HOLOSight and a conventional dot sight such as the SpeedDot 135 is subtle but significant. Both are nonmagnifying and parallaxfree. Both offer headsup, botheyesopen viewing of the target, with aiming points displayed as electronically generated images. However, the dot reticle of a tube design is projected to function as a conventional optical reticle within the sight body i.e., between the ocular and objective lenses, much like a conventional scope reticle. And if your arms are more than 10 feet long, you're on the wrong planet. With a HOLOSight, if you can see the reticle and its against the target, you're on assuming its zeroed, of course. Head and gun do not have to be perfectly aligned. The laser diode in a HOLOSight is a federaldefinition Class II Laser Product, operating at 0.08 milliwatts and 650 nanometer wavelengthmuch less power than a Class III lasersighting device but still not something to look directly into.

<http://ainma.com/images/bowflex-power-pro-xtl-manual-pdf.pdf>

The illuminating beam is completely blocked by the sight housing and is visible only if the housing is broken. The visible holographic reticle image is not the laser but is merely illuminated by the laser so you can stare at it all day long. And because the laser holograph does not actually illuminate the target but merely creates the illusion of a lighted aiming point against the target, the HOLOSight is legal for hunting anywhere a conventional illuminated reticle scope is legal in some states actual projected beam laser aiming devices are not. As just a rough guide, the circle that surrounds the dot subtends the approximate diameter of a 12 gauge trap load shot cloud at 30 yards. When you're shooting clay targets, if the bird is inside the circle when you press the trigger, it's powder. The setup also has obvious applications for moving target lead and longrange trajectory compensation. The differences between the original HOLOSight and the new HOLOSight II are primarily size plus several added functional features. The first generation HOLOSight was actually quite bulky almost as big as a full size tube sight, in spite of being a lensfree singlepane sight. The HOLOSight II is much smaller. The only negative has been the largish size. I'm really looking forward to HOLOSight III. Tasco Optima 2000 Tasco's Optima 2000 Dept. It utilizes a singlepane viewing window with laserilluminated Class II LED reticleimage generation. The most notable aspect of the Optima 2000 is its extraordinarily compact size; it's not much larger than many adjustable targetgrade rear iron sight mechanisms. The sight body fits into a mounting base a Weaver type crosscut clamp is standard, and bases are available that fit into the dovetail rear sight slots of specific auto pistol models. The LED insert consists of a waterproof encapsulated microelectronic unit with goldplated battery contacts extending out either side.

The battery fits into the bottom of the sight body and is enclosed when the sight is attached to a mount base. When inserted, the positive side of the battery should be visible and the side of the battery needs to be pressed against the contacts before being seated in its hole if the negative contact is not properly situated in its recess or is bent out of position, it may touch the positive side of the battery and the LED will not illuminate. The Optima 2000 uses a threevolt lithium type CR2032 camera battery the same as the Burris SpeedDot. Tasco's Optima 2000 sight comes with standard base mount, snap on cover, adjustment tools, and battery; is fully adjustable for windage and elevation and utilizes a small hex wrench with an index Microdial for precise measurements; and its clean, clear dot definition allows a precision sight picture and encourages excellent groups. The LED insert comes in two sizes 3.5 MOA for precision shooting and longer battery life and seven MOA for actionpistol shooting and shotgun aerial target applications. LED change is available by factory service; the two reticles are sold as different models. There are no manual brightness controls. The LED insert senses ambient light and controls the output of the laser illumination to give optimum visibility of the dot against the target. For unusually bright conditions, and in some types of competition shooting, a brighter dot may be preferable. In that case two CR2016 batteries may be used to provide a sixvolt power source instead of the standard three volts a single CR2032 provides. Battery life with the sixvolt setup is only about half of the standard threevolt system. Small as it is, the Optima 2000 is nonetheless fully adjustable for windage and elevation using a tiny hex

wrench and a small plastic Microdial that fits over the wrench to provide an index for the amount of adjustment. One adjustment interval on the dial equals one inch of reticle displacement at 20 yards.

<http://www.peplex.it/wp-content/plugins/formcraft/file-upload/server/content/files/1626d8dfb38274---3m-x64-projector-user-manual.pdf>

The test Optima 2000 came with the 3.5minute reticle, and I mounted it on a Colt Model 1911 in 9x23mm Winchester using an Aimtech gripreplacement base to check how precisely it would permit aiming. With that gun and iron sights I get roughly 2.25 inch average groups at 25 yards, but with the Optima 2000 the average for five fullmagazine strings at that distance was about 1.88 inches. The Optima 2000 is manufactured in England and imported by Tasco. It is also available under other brand names as the FirePoint sight and the Dr. Optik sight with somewhat different feature and accessory sets. It represents the current stateoftheart in electronic sight miniaturization. We look at the futuristic.450 Bushmaster and how it compares to the tried and true.4570. ISS Prop House gives us the rundown on the guns used in Enemy at the Gate. We ping steel with a.300 WinMag at over a mile. Next, we pit subsonic rivals against each other before stretching the legs of this CQB round out to 600 yards from a short 9inch barrel. This means you have the option to read your magazine on most popular phones and tablets. Authorized Dealer. The Burris FastFire.This Burris Reflex Sight is perfect for mounting to your favorite handgun, shotgun or hunting rifle for greater accuracy and faster target acquisition. Compact and lightweight. The Burris FastFire 3 Red Dot Weapon Sight wont affect balance or handling. Plus it offers unlimited eye relief, parallaxfree 1x magnification and incredibly simple operation. This Red Dot Sight by Burris offers upgraded features such as windage and elevation adjustments that dont require any special tools or additional gunsmithing. The Burris Fastfire III Tactical Red Dot Sight has a convenient power button with three levels of brightness. An automatic brightness setting and battery access on the top of the sight, making it easier to change the batteries.

The Burris Fastfire III Red Dot Tactical Rifle Sight is ideally suited for use on pistols and tactical rifles where fast target acquisition is desired and will match up well with carbines. shotgun into exactly the same position every shot. Maintaining proper form on the trap range is one thing. Maintaining it in the real world of flushing pheasants, quail, grouse, and fastflying waterfowl is another. BRAND NEW HAS BEEN OPENED NEVER USED In case I made a typo in the description above. You get the actual item in the photos below. Works great and fun to shoot. Posted with RcmdId ViewItemDescV4,RlogId

p4%60bo7%60jtb9%3Fvo%7B%3Dd70f%2Bf52%3E140244e2c350x104 Never made it to the range with it. Its like new. I listed it as used because I cannot find the box. Only selling because Im selling the rifle and They wont give me any more for it with the accessories. So might as well sell them individually. Has Red. Green and Black sight, Tight lens covers, Good battery. USA lower 49 ONLY! Since its coming off a 22LR it still has plenty of life left because its a really low recoiling rifle. This sight is perfect for other rifles and AIRSOFT guns. Email me with any questions and I will respond ASAP. I do not have the original packaging or payper work. Bought this sight less than a year ago. There are zero blemishes on it. And it is in perfect condition. The PEPR mount has light mounting marks on the base. Please note that the Fastfire III red dot is not included in this package, however all other factory originals are included. The last two pics are of the reticle, one illuminated and one without illumination. This scope is probably the best value in 14x scopes and has great features for the money spent. The MTAC offers superb optical quality.

The image is crystal clear from edge to edge, with excellent color retention and great brightness. Mechanical aspects. The rheostat illumination offers 10 brightness settings; including bright daylight illumination suitable for use on sunny days. Adjustments are in .5 MOA click increments. Low profile capped dials offer quick and accurate POI adjustment, without risking accidental adjustment due to snagging. This is the most affordable 14x tactical scope that doesn't skimp on quality. There are dozens of excellent reviews about this scope online if a more detailed description is needed. Thanks and please feel free to ask any questions! Sorry. NO SHIPPING OUTSIDE OF THE USA. Burris brings added innovation with the Burris MTAC rifle scope. The MTAC is designed to stand up to the hard use of tactical shooters. This scope features a superior light gathering glass than the TAC30. These high quality lenses with hilume multicoatings provide a crisp, clear picture from dusk to dawn. Another major improve The speed bead package includes 3 different height risers. A hard cover, two sets of different length mounting screws and all needed hardware for mounting and sighting in. Please let me know if you have any questions. Ive used it myself and its very accurate and reliable. Its a perfect sight for handguns or shotguns, or as a backup option on a rifle. Because its used. Theres a knick on the top left corner of the hood shown in the pictures but no other marks or scratches. This kit comes with mounting hardware. According to Burris The next generation of FastFire RedDot is here with the introduction of the FastFire III. The popular FastFire II is even better with upgraded features that include a top mounted battery1 CR1632 for easier battery. The precision FastFire III allows for manual brightness adjustment and includes a protective cover and battery.

Just like the rugged FastFire II, the FastFire III features a Steel body construction for extreme durability and is 100% waterproof. The ultimate CQB sight is perfect for mounting on your pistol. Shotgun or rifle, and includes a picatinny style mount. Runs off a CR2032 battery. Has a new one in it and comes with 5 extra. Optic also comes with a Burris ARTER QD mount. This optic is in excellent shape. Works great and holds a great zero. Youd be hard pressed to tell this one from a brand new one. I have 100% feedback and offer free shipping so you can buy with confidence. Any questions feel free to ask. USA buyers only please, thanks Protective cover, and Weaver 45 degree offset mount FastFire sights are light. Small, and tough. They place a powerful, bright red dot on your target. Use as a primary sight. Or pair on top of an existing optic or laser. The electronics and chassis of FastFire sights are built tough. So they handle the abuse of competition and hunting. They're all waterproof and shockproof, and they're covered by our Burris Forever Warranty Shared Features Bright red dot allows for fast target acquisition and easy aiming Compact and lightweight. So it won't

affect firearm balance or handling 1x magnification allows both eyes open shooting. For enhanced awareness and target acquisition Parallax free. For better accuracy Mounts to almost anything—including handguns, Rifles, and shotguns—using Burris mounting systems Windage. With lasting durability Index matched. It is damaged. The red dot illuminates fine but the battery cap threads will not hold. The sight does have some scuffs and scratches. Burris lifetime warranties some of their products but not sure if this qualifies. I don't really have use for this sight so I haven't tried to repair. Free Shipping Red dot optic, Model XTS135 in MINT ALMOST IMMACULATE CONDITION, mounted in a Rock River Forward Offset Scope Mount. With Flipup Lens Covers The sight is made of a 30 mm scope tube with a red.

5 MOA reticle dot sight with 11 brightness settings. It is powered by a CR2032 battery. The optic also comes with a Rock River brand forward offset scope mount ring that is a robust and very high quality. Flip up lens covers are already installed. As currently set up you can co-witness iron sights through the optic on this mount on a standard flattop AR. I bought this optic about 18 months ago. It was mounted on a brand new AR rifle that only had about 50 rounds through it to break in the barrel. I am only selling the optic as I have sold the rifle it was mounted on and the buyer had his own Aimpoint sight.. more This optic is in excellent condition with no scratches or scuffs except a few human hair sized scuffs where you insert a coin to open the battery cover. Those VERY SMALL scuffs are unavoidable and pictured in the included photos. The optic works great and holds zero even when removing and reinstalling on an AR rail. Included are the original box still in its original plastic All manuals and documentation and an almost new battery never hurts to have a spare on hand, but the battery is a very common size you can obtain even at most grocery stores Why pay more than this. Plus tax and shipping for a brand new optic when this one is MINT and is already mounted in a great scope mount with flipup lens covers. I will ship free to anywhere in the continental United States. I am happy to ship to Hawaii. Alaska, however the buyer will pay the actual shipping costs. Send a message to me if you would like me to calculate shipping outside the continental United States. The optic is sold as is. With no returns accepted. Having that said, I reserve the right to accept a return on a pre-approved by me, case by case basis, so long as the optic is returned in exactly the same condition Very lightly used and box kept. Great sight. And VERY clear glass, I just needed a larger magnification. Rain cover on at all times. Picatinny protector cradles at all times.

Photos speak for themselves. Comes with Box. Screw driver, and Scope Rail adaptor. Posted with Its still an awesome sight. Glows red and green with the BDC. Mint shape, doesn't come with the box and papers. What you see is what you get. g6.RcmdId ViewItemDescV4,RlogId p4%60bo7%60jtb9%3Fuk%601d72f%2B%3Eg6%3E14c0d4c594c0x110.
